## Electric

### Control and Safety

700 Series electric fry-tops are equipped with thermostats which permit efficient control of hotplate temperature, to a maximum of 330 °C. 710 models are fitted with two thermostats, making it possible to work on only half the hotplate if required, which affords considerable savings in energy.

The safety limit switches fitted on these appliances prevent damage to the hotplates through overheating due to thermostat failure, and

at the same time protect food from excessive heat.

All these models can be installed at several different voltages and frequencies.

### Quality construction and hygiene

The unit, which is manufactured from stainless steel, has rounded edges that can be cleaned easily. The smooth, ribbed or semi-ribbed steel plate is 15 mm. thick, does not buckle and ensures even

heat distribution. Hard chromium models are coated with a layer of this material 50 microns thick which prevents heat radiating towards the exterior, thus achieving greater efficiency.

These fry-tops are fitted with a 2 - litre collector tray, which is easy to handle and to remove at the front of the appliance. An opening in the front channel common to all griddles allows all the liquids that spill during the cooking process to fall directly into the tray.

## Fry-Tops

# The intelligent solution

The 700 Range of Fry-Tops form part of the new FAGOR INDUSTRIAL series. This innovative range has been created to meet the needs of catering professionals, allowing for maximum flexibility in kitchen planning.

Each and every unit comprising the range offer's special features making the 700 Series unique.

## Quality

The entire Range is built in accordance with International Standard ISO-9001 and other currently applicable EC standards.

- Tubular burners.
- The hot plate is fired by a computer punched stainless steel tubular burner with an 8 setting manual. Controlled thermostat.

- Hot-plate thickness:
  - A 15 mm. thick sheet metal plate is used to ensure even heat distribution without deforming. With the Chrome-plated models 50 microns of Chromium is used to cover the 15 mm. thick plate.
- Fat run-off collector working capacity: 1-2 litres.

**G:** Gas intake: RG 1/2"

**Safety**

All units in 700 Series are equipped with the latest technology, offering the highest degree of safety in operation and handling.

· All burners are equipped with a flame failure device, which cuts out gas supply in the event of the burner being accidentally extinguished.

**Hygiene**

Thanks to the MONOBLOC system, exclusive to FAGOR INDUSTRIAL, hygiene is improved and cleaning is easier.

· All hot-plates are equipped with a channel to enable excess fat to run from the plate to a fat collector located under the grill. This collector is easily accessible from the front of the unit for cleaning.
